

A Brilliant Learning Idea Hiding Behind Too Much Friction

What Is Eureka? — A 7-Slide Product Teardown

Core Question: "Can users discover Eureka's magic before they hit friction?"

The Moment Learning Begins, the Product Shines.

What's Working — Pedagogical Strengths

Narrative-first design

Each subject is a universe — 'The Chosen One' for Maths, 'The Legend of Zing' for Chemistry, 'Bio-Scope' for Biology, 'Light at the Museum' for Physics. No other EdTech product builds full narrative worlds around CBSE curriculum.

Strongest differentiator vs competitors

Watch → Learn → Ace framework

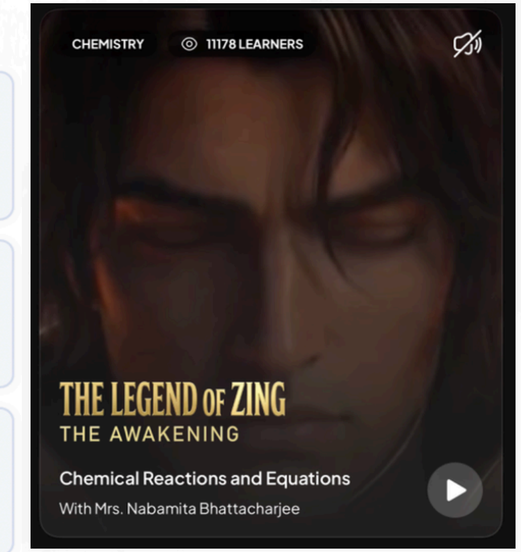

The 3-tab loop on every course page is intentional pedagogy: story-driven video → structured notes + bonus content → MCQ and written tests with badge rewards. Learning has a clear arc, not just a playlist.

Differentiated pedagogy, not just content

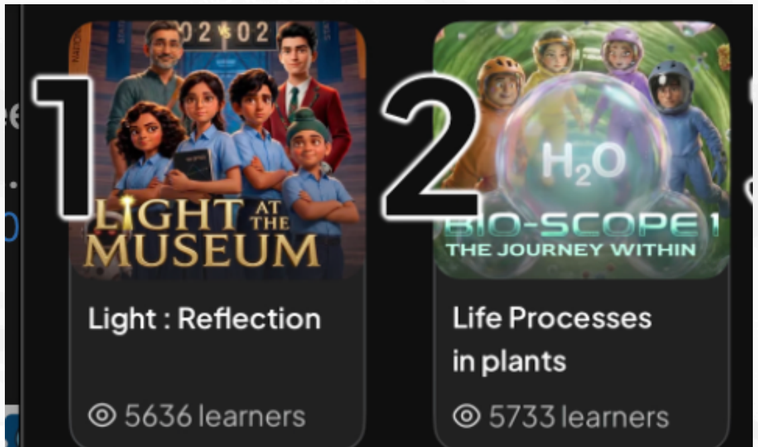

Teacher identity and credibility

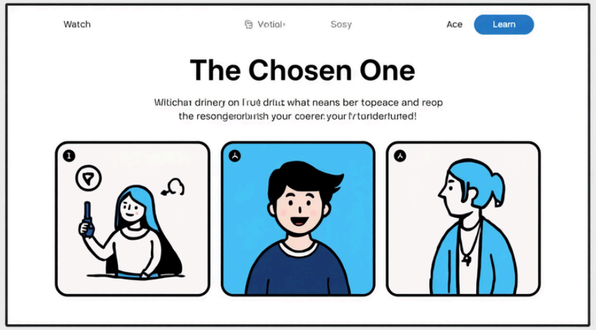

Every teacher has a profile page with photo, years of experience (6–10+ years), teaching philosophy, and chapter list. Mrs. Nabamita Bhattacharjee, Mr. Harshit Singh Rajawat — real people, not avatars. Builds trust before the lesson starts.

Rare in free-tier EdTech apps

Students aren't just watching lessons. They're exploring worlds.

The Best Part of the Product

Each subject is its own narrative universe - Real Numbers becomes The Chosen One, turning abstract concepts into epic journeys. Storytelling is central to Eureka, not just a feature.

Observation: Strongest differentiator vs competitors. No other EdTech product builds full narrative universes around curriculum.

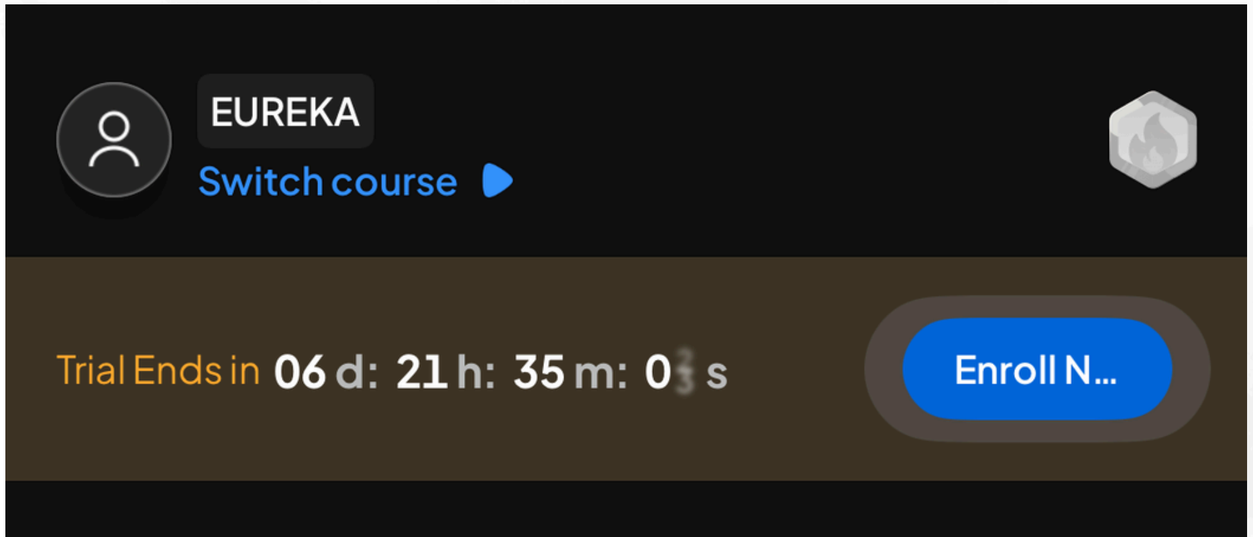

Where Friction Begins

Before value is proven, the product asks for commitment.

Users encounter trial pressure and enrollment asks within minutes — before meaningful learning happens. Selling starts prematurely.

⚠️ Problem: Urgency appears before trust.

When Language Blocks Learning, Curiosity Fades.

Discovery Problem: Students Struggle Before They Understand the Product

Most chapters and explanations feel difficult to follow because students cannot find support in the language they are most comfortable with. Before they can explore freely, they run into confusion. The learning experience becomes frustrating instead of helpful.

Problem: The language barrier appears before product understanding. Students lose confidence early, confusion replaces curiosity.

Enter the Product Manager.

Before confusion begins, speak their language.

1 Language picker at onboarding (Screen 1)

During the very first session, after app open, ask: 'Choose your preferred language for explanations — English / Hindi / Telugu / Tamil / Marathi / Bengali'. Store it on the user profile (currently the profile shows Class/Grade but no language preference). One question, one screen, zero friction added.

Metric: % of users who set a non-English language = proxy for latent demand

2 Bilingual notes first, dubbed audio second

The Learn tab already has a Notes section. Shipping Hindi translations of concept notes is low-cost (text, not re-recording). The Watch tab videos can add a language toggle (like YouTube's audio track) in a later sprint. Start with what costs least: text.

Metric: Notes open rate by language segment vs English-only baseline

3 Doubt resolution in preferred language

The Settings page has Help & Support. A language-aware doubt chat (type a question in Hindi, get an answer in Hindi) would remove the final barrier. This is achievable with LLM tooling today. ALLEN's brand trust does the rest.

Metric: Support ticket volume drop + session length increase post-launch

Let Eureka Prove Itself.

Let Them Learn. Then Let Them Choose.

The opportunity is not to change how students learn, but to remove what prevents them from learning. When access, language, and discovery barriers disappear, students can experience the product's true value. The strongest path to conversion is not persuasion, it's comprehension. Understanding builds confidence, confidence drives engagement, and engagement drives conversion.
